

**Keith Anderson** has more than 20 years' experience leading IT and infrastructure innovation across Papua New Guinea and the Pacific. As the founder of APCS, established over a decade ago, Keith has consistently pushed the boundaries of what technology can deliver in the region, helping organisations and governments adopt modern, scalable digital solutions.

In 2024, Keith led the launch of Papua New Guinea's first native AI-powered data processing system – a major milestone in building local capability and technical expertise. His work is driven by a strong commitment to ensuring that PNG's most valuable data assets remain secure, sovereign, and under the nation's control, while enabling the country to confidently embrace emerging technologies.
